Java Backend Developer | Spring Boot · Spring Security · JPA/Hibernate · PostgreSQL · REST APIs · DSA

SUMMARY

Final-year CS Engineering student (B.Tech, 2027) with hands-on Java backend experience: Spring Boot REST APIs with JWT authentication, JPA/Hibernate persistence, PostgreSQL schema design, and Docker containerization — three full-stack projects live on GitHub and deployed on Render and Vercel. 100+ DSA problems solved across LeetCode and NeetCode. Looking for a Java SDE role where I can build and own backend systems end-to-end.

TECHNICAL SKILLS

Languages: Java (primary), C, TypeScript, JavaScript (ES6+), Python
Java / Backend: Spring Boot, Spring Security, JPA/Hibernate, REST API Design, JWT Authentication, Maven, Multithreading (basic), Collections Framework, OOP, Design Patterns (MVC, Repository)
Frontend: React.js, Next.js, Tailwind CSS, Server Actions & API Routes, Auth.js
Database: PostgreSQL, Prisma ORM, Supabase
CS Fundamentals: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks
Tools: Git, GitHub, Docker, Postman, Vercel, Render

EDUCATION

B.Tech in Computer Science & Engineering | Dronacharya Group of Institutions, Greater Noida | CGPA: 7.0/10 | Expected Graduation: 2027
JEE Main 2023: 96.7 percentile (AIR 41,652)

EXPERIENCE

Data & AI Intern | Ministry of Panchayati Raj, Government of India | On-site, New Delhi | Sep 2026 – Present
- Authored and curated structured JSON training datasets for the MoPR chatbot's LLM fine-tuning pipeline, defining intent–response pairs used to train the complaint-portal conversational interface.
- Organised and normalised panchayat-level records to improve data quality feeding into the chatbot's retrieval layer.

Frontend Developer Intern | Alfido Tech (Online) | Jul 2026 – Aug 2026
- Shipped 6 production React components, converting design specs into responsive, cross-browser-tested interfaces; all accepted on first or second review.
- Merged 15+ PRs across 4 sprint cycles in a Git-based team code-review workflow; zero regression bugs introduced.

Web Developer Intern | Brainwave Matrix Solutions (Hybrid) | Sep 2024 – Nov 2024
- Built 8 pages and 5 reusable UI components from raw requirements; resolved cross-browser layout bugs across Chrome, Firefox, and Safari, reducing reported UI defects to zero in QA sign-off.

PROJECTS

Flapboard — AI-Powered Adaptive Typing Platform | Live: typing-master-pied.vercel.app | GitHub
Java · Spring Boot · Spring Security · PostgreSQL · JPA/Hibernate · JWT · Docker · Next.js · LLM API
- Built a Spring Boot REST API with JWT authentication and PostgreSQL persistence for user accounts, typing sessions, and progress history; containerised the backend with Docker and deployed to Render (backend) and Vercel (frontend).
- Designed an adaptive drill engine that tracks WPM and accuracy per key cluster and generates targeted practice sequences; all scoring logic is deterministic Java — LLM is used only to narrate personalised coaching output.
- Integrated a live LLM API that converts structured performance metrics into coaching text, keeping all calculations in Java business logic.

Golf Charity Platform — Full-Stack Fundraising Platform | Live: golf-platform-gn.vercel.app | GitHub
Next.js · TypeScript · Supabase · PostgreSQL (Neon) · Prisma · Razorpay · Zod
- Built a role-based platform (donor, organizer, admin) demonstrating end-to-end CRUD operations with server-side authorization and Supabase auth across three distinct user roles.
- Designed a relational schema (Profile, Organization, Campaign, Donation, Payment) in Prisma/PostgreSQL and integrated Razorpay for end-to-end donation payment tracking with transaction history.
- Implemented an admin verification workflow for organization onboarding with document upload, campaign management, and donation reporting.

HireTrack — Recruitment Management Platform (ATS) | GitHub: github.com/Gaurav18071/Hiretrack-ai
Next.js · TypeScript · Prisma · PostgreSQL (Neon) · Auth.js · bcrypt · Zod · shadcn/ui
- Built credentials-based authentication with bcrypt hashing, role-scoped dashboard routes, and recruiter-scoped job creation and listing.
- Designed a relational schema with a unique candidate–job constraint preventing duplicate applications; implemented per-application hiring pipeline: Applied → Screening → Interview → Offer → Hired/Rejected.

ACHIEVEMENTS & LEADERSHIP

- **Problem Solving:** 100+ DSA problems across LeetCode and NeetCode (Blind 75 roadmap).
- **Smart India Hackathon 2024 — Team Leader:** Led a 6-person team; solution selected for the college's official SIH submission. Owned technical architecture and task breakdown across frontend and backend modules.
- **TechnoXian Line Follower Robot Competition — 5th Place (Global):** Wrote the motion-control and path-following algorithm in C for the line-follower robot; team placed 5th worldwide.
- **Class Representative:** Coordinated logistics for a college cultural event attended by 200–300 students and faculty.
